1) Introduction

This Tutorial will walk you through initial login and the various capabilities of the Filed Task Manager system, including Mapping, Reporting and Administrative capabilities. The intention of this tutorial is to be a step-by-step guide, showing how each of the various features and capabilities of the software are accessed and exercised in order to learn how it can be of benefit to you and your business.

2) Login

The Field Task Manager login can be displayed by viewing the URL <http://itrackall.in:8080/events/gts>. You will be presented with a Login window as shown below:

Enter your Login ID and Password

Email Id:

User:

Password:

Login

(Cookies and JavaScript must be enabled)

Please Login

Email Id: It is the Email Id under which organization has opened account with ConnectMyWorld

User: It is the user id of account administrator or user id created by account admin for supervisor.

Password: It is the password allocated for account admin or supervisor.

3) Main Menu

As you can see, the functions are broken down into 3 main categories, **Mapping**, **Reports** and **Administration**. Each of the tabs corresponds to the appropriately named category of functions.

Navigation may be accomplished in one of two ways:

From the Main tab, select [Main Menu](#) and the screen displayed above will be presented. From there, you may select whichever section of the application is of interest.

Alternatively, you may use the individual tabs (Mapping, Reports, and Administration) to select functions within those specific categories.

4) Mapping

4.1) Tracker Map

Now that we know how to navigate, let's get started with the Mapping functionality. Click on the link for [Track Tracker Location on a Map](#) as highlighted above and the following screen will be displayed.

NOTE: Your map may be different depending on the date and time range selected

#	Date/Time	Status	Lat/Lon	km/h	Distance KM	Battery Level(%)	Locations/Events
1	2017/07/25 00:00:28	Alert	28.5070688/77.337981	0.0	0	84	Action: Data connection error>Please check if device data/internet is enabled or needs to be reset. Send SMS to device with text as status
2	2017/07/25 00:05:27	Alert	28.5070688/77.337981	0.0	0	88	Action: Data connection error>Please check if device data/internet is enabled or needs to be reset. Send SMS to device with text as status

Here we have the basic map view, with map **zoom** controls on the left.

On the right hand side, we have the date range controls allowing you to select date and edit the time (in 24 hr format) for which you'd like to review activity for a particular tracker. To select a different end date, click on the 3 triangles below the calendar and the "To" calendar will roll up to replace the "From" calendar. Follow the same procedure here to select your end date and time and then click the [Update](#) button to redraw the tracker history on the map for the selected date range and time.

Moving a bit further down the right hand side, you'll notice the word **Replay** -- click on the arrow just to the right of it and it will begin a replay of the timeframe shown on the map, starting with the

first point and continuing through until the final point has been plotted. This is a useful mechanism for quickly seeing the path a tracker has taken throughout a chosen period of time.

The **Pushpin Legend** in the lower right hand corner defines the colour code of each of the points or "pushpins" on the map.

One final note about the basic map display -- if you look in the white space just above the calendar on the right hand side, you'll notice a line that denotes the Last GPS event, telling you the last time this tracker reported its position to the database. On the left hand side of that white space is a box with the tracker name. Clicking in the box brings up a list of trackers, any of which can be chosen just by clicking on that tracker name.

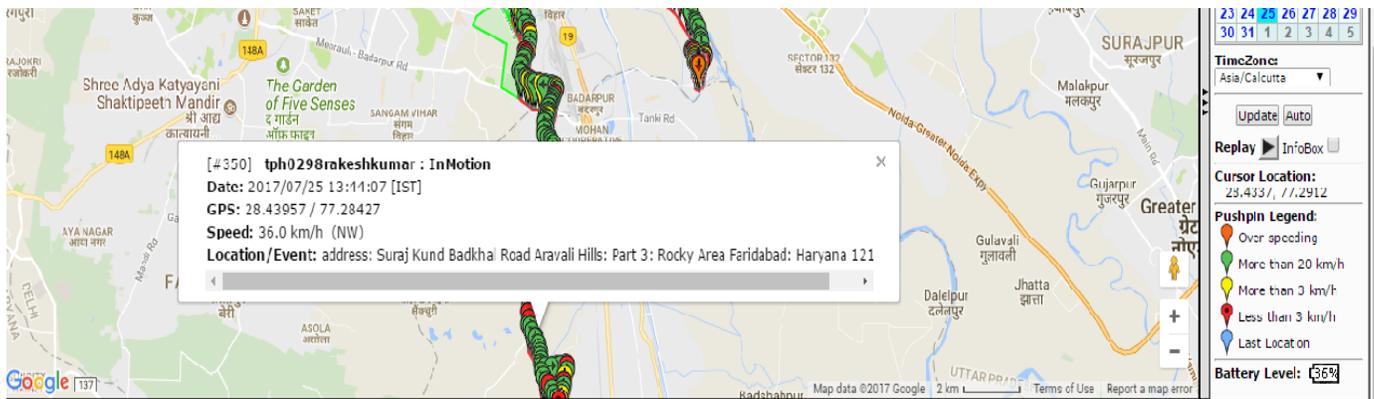

Zooming in on the data in the left hand portion of the map, you can see greater detail of the map and the individual pushpins.

Placing and clicking your cursor over any pushpin will bring up an InfoBox. The InfoBox includes by default the data point, the **Device name, its Status, Date, Time, GPS Latitude/Longitude, Speed, Heading, and Address** (if available).

As an interesting side note, if you check the **InfoBox** checkbox before clicking the **Replay** button, then each Pushpin will have an InfoBox attached to it as the trail of Pushpins is painted on the map.

Placing the cursor on the red pushpin, we see that the status is reported as "Stopped" and Speed is reported as zero. Additionally, here the system reports a reverse-geocoded street address.

We have two ways of diving deeper into the details. The first is obviously to continue to zoom tighter into that portion of the map. The second is to utilize the Location Details, at the bottom of the map.

Hide Location Details

The name for each of the columns are as follows (reading from left to right): **Pin #, Date/Time, Status, GPS (lat/long), Speed & Heading, Distance KM, Battery Level (%) and Locations/Events.**

Status Column can have these values:

- InMotion : Tracker is moving with certain speed.
- Location : Tracker is not moving.
- Arrive : Tracker is arrived to already created Geo Fence.
- Depart : Tracker is departed from already created Geo Fence
- Alert : Tracker has generated event for your review
 - a. Alert in green colour, means no action required
 - b. Alert in red colour, means action required from tracker user, with those tracking results might be impacted adversely.
- Notify : Tracker user has enter data and submitted to be available for various reports.

4.2) Tracker Group Map

Now that we're done with the individual tracker mapping capabilities, let's look at what can be done in terms of mapping group tracker. From the [Mapping](#) tab, select [Tracker Group Map](#) to display all the trackers in a given group. Depending on the manner in which trackers are grouped within your organization (covered later in Administration), it is possible to look at either an individual group of trackers or your entire organization trackers on the map.

The screenshot shows the 'Tracker Group Map' interface. At the top, there are navigation tabs: 'Main', 'Mapping', 'Reports', and 'Administration'. Below the tabs, there's a search bar for 'Find Location' and a dropdown menu for 'Tracker Group Map' set to 'All'. The main area is a map of India with several red pushpin markers indicating tracker locations. To the right of the map, there's a 'Select To Date' calendar for July 2017, a 'Time Zone' dropdown set to 'Asia/Calcutta', and a 'Cursor Location' field showing '17.9369, 96.4600'. Below the map is a 'Pushpin Legend' with two entries: a blue pushpin for 'Last Location' and a red pushpin for 'No update since last 20 minutes'. At the bottom, there's a table with columns: '#', 'Tracker Id', 'Tracker Name', 'Date/Time', 'Lat/Lon', 'Since Last Check-In', 'Battery Level(%)', 'Manage Task', and 'Locations/Events'.

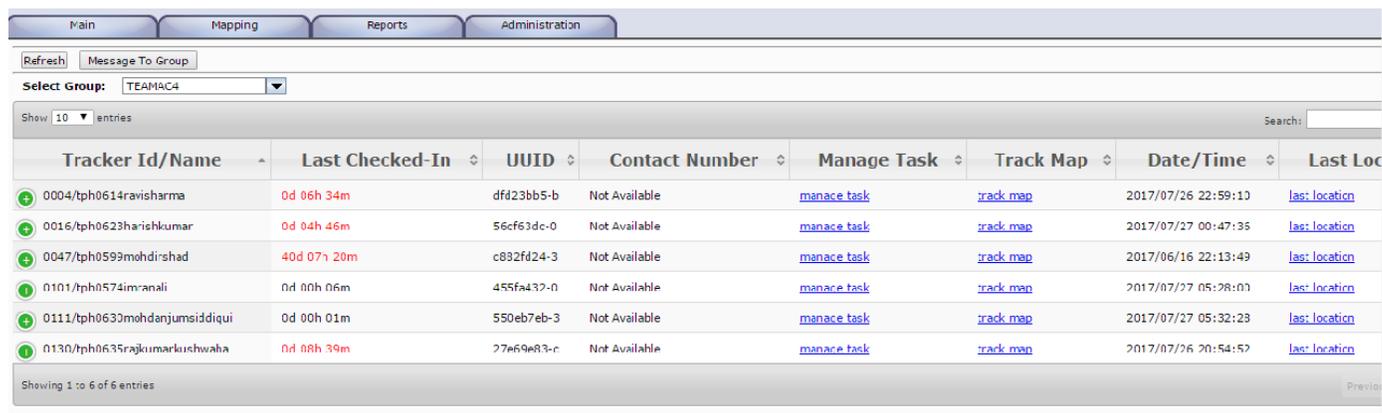

#	Tracker Id	Tracker Name	Date/Time	Lat/Lon	Since Last Check-In	Battery Level(%)	Manage Task	Locations/Events
1	0020	0020	2016/10/22 12:10:44	12.818050/77.695750	2/d 05h 33m	1	manage task	Office/address: 136/B Bommasandra Industrial Area Bengaluru; Karnataka 560099

10	0012	rajeeburehman.+919740665403	2017/07/26 18:27:38	18.439237/79.113667	0/d 00h 17m	9	manage task	address: 7-1-697, Vemulawada Rd, Manikarma Theta, Karimnagar; Telangana 505001; India
11	0015	praveen.9980952164	2017/07/26 18:38:40	12.757218/77.655701	0/d 02h 03m	26	manage task	address: 2/b/2, agam - Anekal Road Jagan; Karnataka 560105
12	0006	sahstikran.9900032091	2017/07/21 22:31:34	12.511431/77.628649	4/d 20h 12m	92	manage task	address: 187 2nd Cross Road Raju Gandhi Nagar; Minneswara Naga; Sector 6, HSR Layout Bengaluru; Karnataka 560068

All the navigation controls are the same as the individual [Tracker Map](#), Trackers positions can be viewed in date-specific configurations by changing the calendar and detailed information on any tracker can be accessed by placing the cursor over any "pushpin" to display. If multiple groups have been defined, then alternate groups of trackers can be accessed in a pull-down menu by clicking in the field next to "Tracker Group Map"

Note: If the pushpin colour of particular tracker goes red means that no data received from this tracker since last 20 minutes.

4.3) Group Message

It is one more view to view trackers latest event for the selected group. This screen can be used to send the Message to the whole group. Message sent to group will convert into task in the system for each device in the group and notify the same to all device users of that group through Google notification.

Tracker Id/Name	Last Checked-In	UUID	Contact Number	Manage Task	Track Map	Date/Time	Last Loc
0004/tp0614ravisharma	0d 06h 34m	dfd23bb5-b	Not Available	manage task	track map	2017/07/26 22:59:10	last location

5) Reporting

All reports can be generated against selected date and time range.

Important Note: The report will be generated for the selected time range for all the days selected. For example if the date range is 24 July to 27 July and time range selected is morning 8 AM till evening 8 PM.(i.e. 20:00) then the reports will be generated for all day from 24 to 27 July for 8AM till 8 PM only.

Reports can be generated in 2 formats HTML and CSV(XLS).

Reports are classified in 4 segments

1. **Tracker Detail**(To provide details of events for individual tracker)
 - a. **Event Detail**(TEDR)
 - i. It comes with various filters and one can choose appropriate filter as per the requirement.
 - b. **Staff Attendance**(SADR)
 - i. It is for every day attendance of staff, first attendance of the day will be considered as check-in and last attendance of the day will be considered as check-out.
 - c. **Trip Detail**(against base geo zone)(TTDR)

- i. It is daily report
 - ii. It is useful only when the multiple trips are done in a day against base geo zone.
- d. Speed Over(TSOR)
 - i. It is the report to show all the points where speed by the tracker has exceeded the defined speed limit.
- 2. **Tracker Summary**(To provide summary of events for individual tracker)
 - a. Stop Time Summary(TSSR)
 - i. It is able to give an idea about stoppage time of tracker if exceeding certain time limit.
 - b. Trip Summary(against base geo zone) TTSR
 - i. It is daily report
 - ii. It is useful for when multiple trips are done from the base geo-zone in a single day.
- 3. **Tracker Group Details**(Same as Tracker Detail, but showing for the selected whole group in one go)
 - a. Event Detail(GEDR) with various filters
 - b. Staff Attendance (GADR)
 - c. Speed Over(GSOR)
- 4. **Tracker Group Summary**(This section is having summary report for the whole selected group)
 - a. Last Check-in Since(GLSR)
 - i. Able to give view for all devices when last time device contacted and send data to platform for all device in the group.
 - b. Trip Summary (Against base geo-zone)(GTSR)
 - i. It is daily report.
 - ii. It is useful report when multiple trips are performed by the device holders in a specified group against a single geo-zone in a single day.
 - c. Hourly Utilization(against base zone)(GHSR)
 - i. It is hourly report
 - ii. It is useful report when multiple trips are performed by the device holders in a specified group
 - d. Stop Time Summary(GSSR)
 - i. It is consolidated view for stop summary for the each device for the selected group..

6) Administration

6.1) Account Detail

By selecting [Account Detail](#) from the [Administration](#) tab. This is where account-wide contact information, and units-of-measurement information and format. It is view only page.

6.2) User Admin

By selecting [User Admin](#) from the [Administration](#) tab, the [View/Edit User Information](#) screen will be displayed, as shown below. On this screen, you can review all of the defined users in the system. There are a number of fields that are available in this summary view -- **User ID**, **User Desc**, **Contact Name**, **Contact Email**, **Time Zone** and whether the user is **Active** (ie. allowed to log-in). As you can see from the list below, it isn't necessary to populate all of these fields when setting up new users. If all of the fields are not defined, the table in the User Information Summary will just have some gaps.

Note: Edit, New and Delete user option will be available only to "superadmin" userid of this account. Otherwise it will be view only information.

Selecting the *Edit* button opens the *View/Edit Tracker Information* screen where the tracker-specific information is defined.

Man Mapping Reports Administration

View/Edit Tracker Information(UUID: c9d43ea3-7)

Tracker ID:

Creation Date:

Active:

Tracker Name:

Driver/Staff Mob. Number:

Tracker SIM Phone Number:

SIM Data Plan Expiry/yyyy/mm/dd:

Overwrite Master Mobile Number:

Overwrite Alert Notify Email:

Alert If Exceed: km/h(0.0 means no over speed alert)

Assigned User ID:

Geozone Alerts:

Tracker Group Membership:

All [all]:	<input checked="" type="checkbox"/>
Chalkewadi [chalkewadi]:	<input type="checkbox"/>
babu [n]:	<input type="checkbox"/>

Here there's a significant amount of key information that must be entered in order for the in-tracker devices to communicate with the server.

- Tracker ID:** will be passed from the prior screen.
- Active:** should be selected to 'Yes' if the tracker is in active status, otherwise set to 'no'. Events from an inactive device will be ignored, and not inserted into the database.
- Tracker Name:** is the name for this tracker. By default Id and Name will be same, all the reports will refer to tracker name also.
- Driver/Staff Mob. Number:** Device user mobile number..
- Tracker SIM Phone#** is the phone# assigned to the SIM supplied by the wireless service provider. This field is used for informational purposes only.
- SIM Data Plan Expiry:** It is the expiry date for SIM card used for data.
- Overwrite Master Mobile Number:** This is the supervisor mobile number, and will be used to send notification to supervisor through SMS.
- Overwrite Alert Notify Email:** This is the supervisor email id, and will be used to send notification to supervisor through email.
- Alert If Exceed:** If the trackers exceed the speed limit specified here, notification send to supervisor.
- Assigned User Id:** It is the user id assigned here.
- Geo-zone Alerts:** if the option is selected as "no" means no geo-zone alert will be sent for this tracker.

In the Group Membership window, all trackers will automatically belong to the 'All' group. This is where you can select whether you want this to tracker belong to any other groups, simply by

checking the appropriate boxes. Note, trackers can belong to multiple groups, if desired. The details of [Group Administration](#) will be covered in the next section.

When all changes have been made to your satisfaction, click the [Change](#) button to save your changes.

6.4) Tracker Group Admin

Note: Group management can be done only by “superadmin” user.

The goal of the [Group Admin](#) function is to simply define what groups exist. As we just covered in the [Tracker Admin](#) section, this is where all of the trackers are assigned to their groups. So all that is left to do in the [Group Admin](#) function is to define the actual Groups. By selecting [Group Admin](#) from the [Administration](#) menu, the [View/Edit Group Information](#) screen will be displayed, as shown below.

In the table, the following pieces of information are displayed -- **Group ID**, **Group Name** and **Tracker Count**. If new groups need to be created, that is done with the field in the middle of the page under **Create a new Group**. Just make sure to keep the ID confined to a single word with no capital letters or special characters.

Man Mapping Reports Administration

View/Edit Tracker Group Information

Select a Tracker Group:

Select	Tracker Group ID	Tracker Group Name	Tracker Count
--	all	All	4
<input type="radio"/>	chakewadi	Chalkewadi	1
<input type="radio"/>	tn	babu	1

Create a new Tracker Group:

Tracker Group ID:

Selecting the *Edit* button opens the *View/Edit Group Information* screen where the Group-specific information is defined.

Tracker Group ID:

Tracker Group Name:

Current Tracker Member List:

#	Name	ID
1	mani	mani

This screen shot will drive home the point of just how straight forward it is to set up and administer groups. When you've drilled down to the edit function on a specific Group, just give the group a text description in **Group Name** and you're done. The *Current Tracker Member List* shows all trackers which are currently a member of this group. When satisfied with your modifications, click the *Change* button to save changes.

6.5) Geozone Admin

One of the more powerful administrative tools is the [Geozone Admin](#) function. A Geozone can be defined around any reference location. Definition is simple and once complete, movement of trackers in and out of that Geozone will populate the [Event Detail](#) report with the specific description of the Geozone used a custom reverse geocoded address. By selecting [Geozone Admin](#) from the [Administration](#) menu, the [View/Edit Geozone Information](#) screen will be displayed, as shown below.

In the table below, the following pieces of information are displayed -- **Geozone ID, Description (Address), Arrival Zone, Departure Zone, Group ID**.

The information in this table contains the following fields:

- Arrival Zone** set to 'Yes' indicates that an Arrival Event will be created when a tracker enters that Geozone (requires additional configuration and support).
- Departure Zone** set to 'Yes' indicates that a Departure Event will be created when tracker exits that Geozone (requires additional configuration and support).
- Group Id:** This is to indicate the Geo-fence belongs to specific group and hence trackers only.

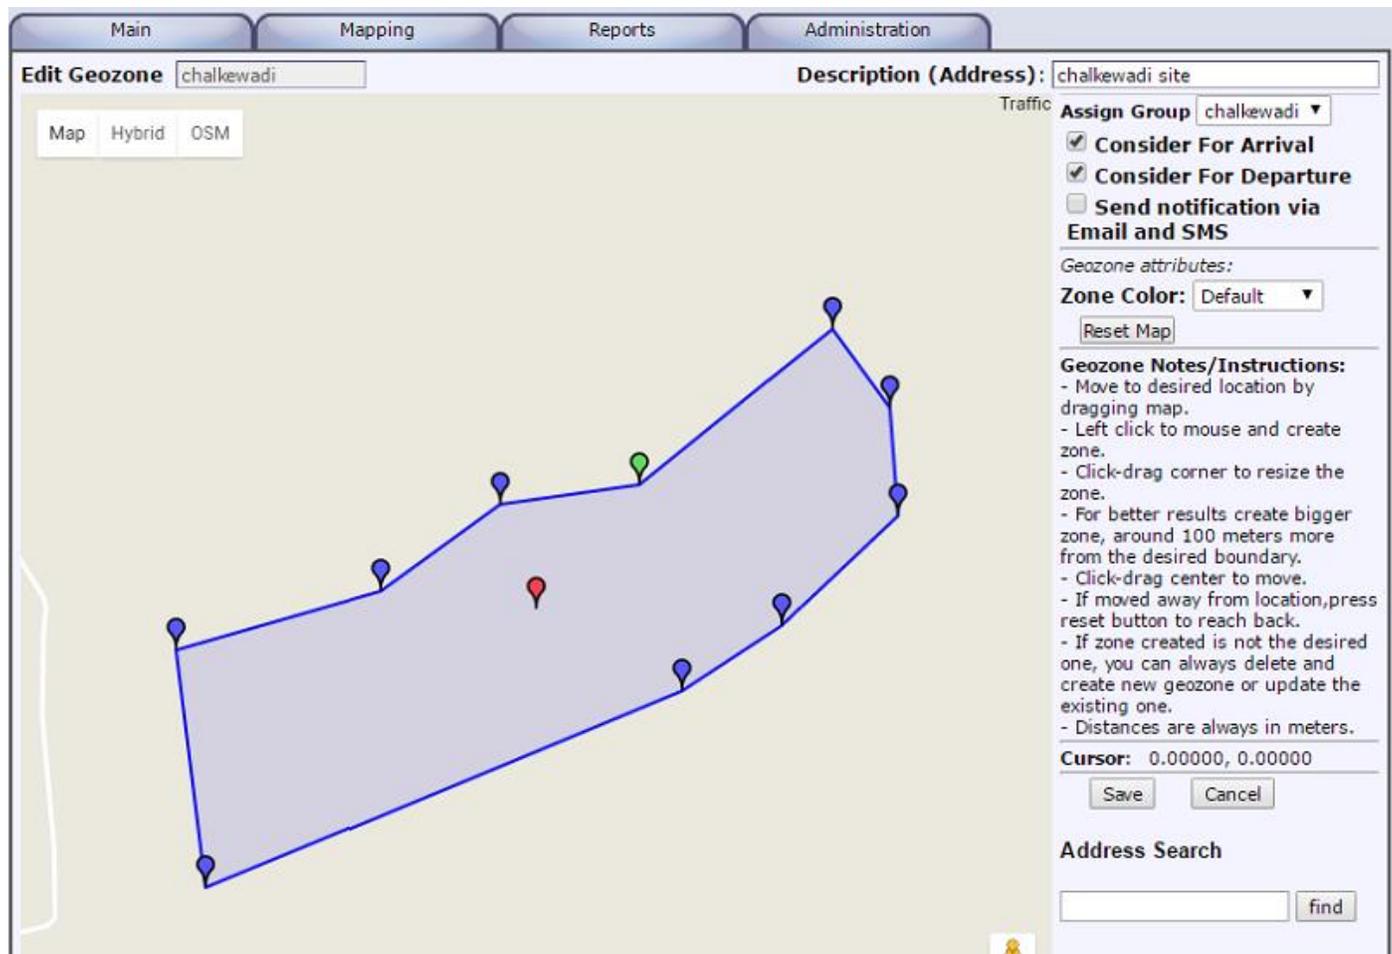

Select	Geozone ID	Description (Address)	Arrival Zone	Departure Zone	Group ID
<input checked="" type="radio"/>	chalkewadi	chalkewadi site	Yes	Yes	chalkewadi
<input type="radio"/>	maloshi	Maloshi site	Yes	Yes	chalkewadi
<input type="radio"/>	sep3105060707a	Custom Zone	Yes	Yes	All
<input type="radio"/>	tosheqar	tosheqar site	Yes	Yes	chalkewadi

View Edit Delete

Create a new Geozone:
Geozone ID:
New

If new Geozones need to be created, that is done with the field in the middle of the page [Create a new Geozone](#). Just make sure to keep the ID confined to a single word with no capital letters or special characters.

Select a Geozone and then click the [Edit](#) button to display the edit screen.

Use Address Search option to reach to the location where Geo-Fence need to be created.

If you know Latitude and Longitude of the exact location where Geo-Fence need to be created. In the address search Latitude,Longitude can also be put, for example if the latitude/longitude of the address is 12.99304/77.70062 then in address search we can use 12.99304,77.70062 to reach to the point location where Geo-Fence need to be created.

[Reset Map](#) button, will help to set the map to center position where the Geo-Fence created.

It is very important to fill the **Description (Address)** with proper description of Geo-Fence like Head Office Delhi, as this is the address will be appearing in the various reports for Geo-Fence.

When all edits are complete, click the [Change](#) button to save your changes. As before, the [Cancel](#) link will cancel any edits you have made.

Create Geo-Fence inside Geo-Fence:

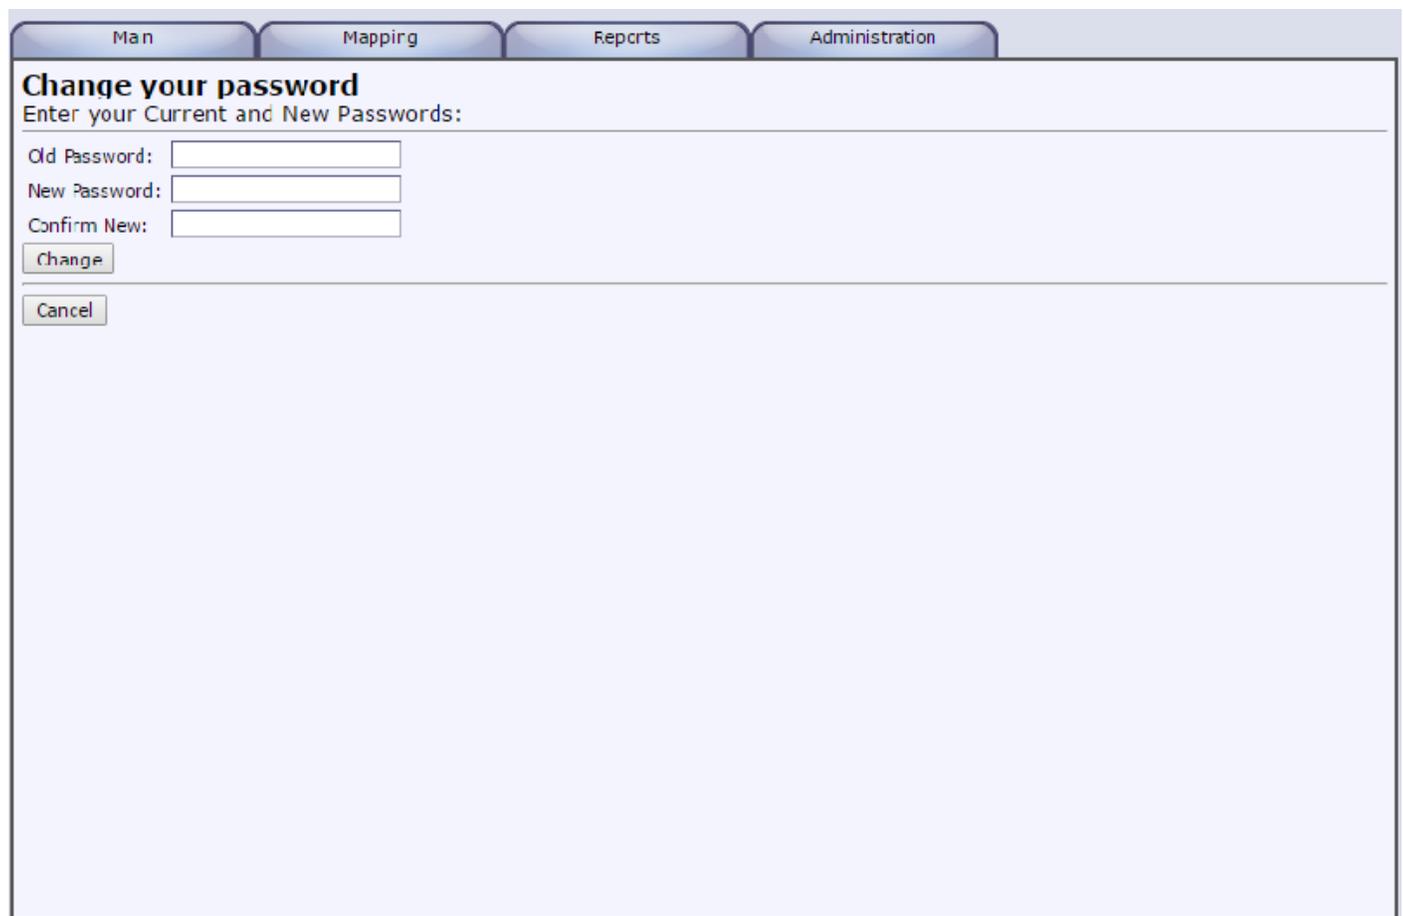

There are scenarios when small geo-fences need to be created inside a big geo-fence. Our system supports this scenario to a maximum of 1 level.

To achieve this the only requirement is when a geo-fence ID is created the child geo-fence ID must prefix the parent geo-fence ID. For example, if the parent geo-fence ID is "abc" then the child geo-fence ID can be "abc123". Here the child geo-fence ID is prefixed with the parent geo-fence ID where the actual child ID could have been "123".

6.6) Password Admin

The simplest and most familiar of all administrative functions is setting and changing passwords. Password Admin is where that is performed and is very straightforward. By selecting [Change Password](#) from the [Administration](#) menu, the [Change your password](#) screen will be displayed, as shown below.

Enter your old password in the first field and then your new password in each of the next two fields. When done, click [Change](#) to save your changes and you're done.

The screenshot shows a web application interface with a navigation bar at the top containing four tabs: 'Man', 'Mapping', 'Reports', and 'Administration'. The 'Administration' tab is selected. Below the navigation bar is a form titled 'Change your password'. The form contains the following elements:

- A heading: **Change your password**
- A prompt: Enter your Current and New Passwords:
- Three input fields:
 - Old Password: [text input]
 - New Password: [text input]
 - Confirm New: [text input]
- A 'Change' button.
- A 'Cancel' button.

Glossary

Various Platform Event Types With Explanations

1. Location

Either device is static or currently getting location with the help of Network or Wi-Fi.

2. In Motion

The device is getting location with the help of GPS satellite and moving.

3. Alert

These messages are very important to understand as it is directly related to the activities of device holder and can impact tracking results to a very large extent.

Depending upon the alerts received and tracking results, it might be required to talk to device holder and inform him/her to avoid any such activity which can impact tracking adversely. Once the device holder will get to know that his/her activities are recorded in the platform, he/she will not try such attempts in future.

- **Tracking service is stopped.**
 - Once the device holder chooses this option, tracking of device will be completely stopped immediately.
- **Tracking service is not enabled.**
 - It means that tracking service of this device is stopped and no tracking is happening.
- **Tracking service started.**
 - It means that tracking service of this device is started.
 - If GPS or Location service with high accuracy is enabled, then tracking of the device will continue to happen properly.
- **This device is currently facing difficulty to obtain GPS signal.**

- if the device is not inside the building, the way device is carried by the device holder can be an issue, Ideally for best GPS signal device should keep away from the body, like keeping in backpack and without any metal cover.
- If the device need to keep in the pocket then it must be kept as screen facing towards the body to get the good GPS signal.
- **Device is going for shutdown.**
 - it means that the device is going for the shutdown weather the device holder is shutting down the device or device is going to shutdown by its own because of low battery or low memory.
 - Once the device is shut down, no tracking will happen.
 - If it is because of low battery, then low battery message must have appeared in the log earlier.
 - Otherwise, if device shutdown happened because of low memory, then the device will restart on its own in few seconds.
- **Device started successfully.**
 - It means the device has started successfully after its shutdown.
 - Tracking service should also be started automatically within few seconds after device restart.
 - If service is not starting, it means that GPS Tracker App has been uninstalled by the device holder and no tracking will happen as a result of that.
 - It is important to note that App can't be reinstalled by the device holder unless the password is known to him/her.
- **For <device> Tracking service started successfully. For better results always restart the device before starting the day.**
 - It means that app service has started successfully and tracking should start happening.
 - Sometimes because of low memory also this service gets restarted, but in this situation tracking result will not be impacted.
 - If the tracking results are impacted means that the device holder might have killed/stopped the service earlier through Application Manager and now he/she starting it again.
- **GPS or Google Location Service with high accuracy is not enabled.**
 - It means that tracking will stop happening, except some situations where a device can acquire the location from Network tower or Wi-Fi.
 - This message will start appearing in the log in regular interval if the GPS or Location with high accuracy is switched off for the device.
 - Also at the same time a popup alert will appear in the device for reminding the device holder for switching on the GPS or Location service with high accuracy.
- **GPS or Google Location Service with high accuracy is switched ON.**
 - It means that the device holder has switched ON the GPS or Location Service with high accuracy.
 - Once the GPS or Location Service with High Accuracy is switched ON the tracking will start happening.
- **GPS or Google Location Service with high accuracy is switched OFF.**
 - It means that the device holder has switched off the GPS or Location Service with high accuracy.
 - Once the GPS or Location Service with high accuracy is switched off the tracking will either stop happening or it will be very limited tracking.
 - If the GPS is switched off and still location tracking is happening means that device Location option is ON but not on "**High Accuracy**", High Accuracy is the the only desirable option for best tracking results.

- **Either device is facing difficulty to obtain GPS signal or permission to get location is denied by the device.**
 - In some of the devices, starting Android KitKat(4.4.2) or up versions, Permission Manager is introduced(**Settings -> Security -> App Permissions**), check for App permission here, this app's "**Get Position**" permission must not be denied by the device.
 - **Permission denied by the device will be considered as a malicious attempt by the device holder for not to be tracked.**
 - Or it might be some other security app installed in the device which is stopping to get the location by this App.
 - Sometimes this message might be appearing because of GPS module of the device got hanged, in that case Switch OFF then ON the GPS should solve the problem.
 - Or this message can also appear when either the device is inside the building or kept in such way by device holder, that the device is facing difficulty to obtain the GPS signal.
 - Device need to keep away from the body, like in a backpack or inside phone holder without any metal cover or keep in pocket facing screen towards the body.
- **For this device to work GPS correctly data connection must be on and available.**
 - If the device is inside the building, then no action required, because GPS signal might not be available inside the building.
 - If the device is under an open sky some time device need to reset its GPS with the help of the internet and, for that data connection need to be on and available.
- **The mobile data internet connection is not enabled.**
 - This is just for information that if the data connection is not enabled, live tracking of device will not be possible.
 - Sometimes to work GPS correctly, data connection availability is also required.
- **Device time zone not set to automatic mode might result in poor or no tracking results.**
 - If the time zone is set to automatic giving no chance for employee to play around with time zone settings and manipulate the same.
 - Wrong time zone setting with the device might result in poor or no tracking results.
- **Device time not set to automatic mode might result in poor or no tracking results.**
 - If the time is set to automatic giving no chance for employee to play around with time settings and manipulate the same.
 - Wrong time setting with the device might result in poor or no tracking results.

4. Notify

- It means that the device holder has filled the form and submitted the information with the current location and time.
- This information will appear in the log with colon(:) separated values.

5. Arrive

- If Geo Zone is configured, it is the arrival time for the device to enter this Geo Zone.

6. Departed

- If Geo Zone is configured, it is the departure time for the device to depart this Geo Zone.

Support

We are very much willing to support you and for that you can contact us (<http://connectmyworld.in/contact-us>) or write your queries or concern through our Support Center after login to <http://connectmyworld.in> and we will bring it to finish line.
